

# Acknowledgments

The following text is a collective work in the best sense of the term, a collaboration of individuals at different types of institutions worldwide. For that reason, many contributions should be acknowledged.

Texts included in this book were developed, used, and refined in courses at the Rose-Hulman Institute of Technology, Terre Haute, IN, the United States; Kanazawa Institute of Technology, Nonoichi, Ishikawa, Japan; National Yunlin University of Science and Technology, Douliu, Yunlin, Taiwan; the University of Michigan-Shanghai Jiao Tong University Joint Institute, Shanghai, China; and Purdue University, West Lafayette, IN, United States.

At those institutions, the authors would like to thank all of their colleagues, especially Samuel Hulbert, Thomas Mason, James Eifert, Peter Parshall, Toshiyuki Yamamoto, Scott Clark, Pei-Feng Chang, Peisen Huang, Xinwan Li, Gang Zheng, David Barnet, David Hung, Joel Ebarb, Christopher Yeomans, Daniel Smith, Daniel Kelly, Carla Zoltowski, Andrew Brightman, Brent Jesiek, and Qin Zhu.

Many of the case studies began as projects by outstanding students in “Professional Ethics” and “Orienting Engineering Ethics in Terms of China and Chinese Values” at the University of Michigan-Shanghai Jiao Tong University Joint Institute and “Global Moral Issues for Engineers” at Purdue University. These contributions are as follows: Fan Yiming, Shen Li, Xie Yuan, and Yang Guang worked on “The Überlingen Midair Collision”; Kendall Kyle worked on “Engineering a Better Global Future” and “Aligning International Responsibility with Local Needs”; Jiang Weifu, Song Shiwei, and Wei Yi worked on “McDonnell and Miller, and the ASME”; Fan Yilang and Anant Dugar worked on “Global Professionalism?”; Gong Yilan, Zhang Guangyu, Ding Shuhui, Wang, and Zhu Sheng worked on “Development and its Broader Contexts”; Shen Haishangyang, Wang Mengchen, Yan Yifei, Yuan Peng, Chen Yinfan, Dong Yi, Tian Runfeng, and Anant Dugar worked on “Volkswagen, the Environment, and Global Impact”; Zhai Zimu, Song Han, and Chen Mo worked on “The Uber Rape Scandal”; and Qian Shiyi, Tao Zui, and Wei Shupeng worked on “Engineering and Public Knowledge.”

James Mollison helped to collect references, offering suggestions for the improvement of the text, and Jessica Sun read through the entire text, offering suggestions for its improvement as well. Additionally, Stephanie Cernera, Mukunda Aithal, Ren Xiang, and Parker Lewellen provided excellent feedback on various parts and suggestions for their improvements.

Finally, Heinz Luegenbiehl would like to thank Jun Fudano, Tokyo Institute of Technology and formerly of Kanazawa Institute of Technology, for the opportunity to pioneer teaching engineering ethics in Japan and for numerous occasions of financial support to conduct research. Rockwell Clancy would like to thank, first and foremost, Heinz Luegenbiehl, from whom he has learned a tremendous amount about engineering ethics, especially in international contexts. Additionally, he would like to thank the University of Michigan-Shanghai Jiao Tong University Joint Institute for a teaching leave and Purdue University for a grant during the spring 2016 semester to work on this book and, last but not least, his family, friends—especially Kelly VandenBosche and Arjen Kleinherenbrink—and students for all their support over the years.
